PROFESSIONAL SUMMARY

I am a Frontend Developer who turns ideas and designs into clean, functional, and user-friendly web applications. I work across frontend design, backend integration, and AI-enabled product workflows, translating requirements into clear implementation paths and reliable products. I have built responsive product interfaces, API-connected dashboards, authentication and payment workflows, operational tools, healthcare interfaces, and data-rich business products with React, Next.js, TypeScript, and JavaScript. I work with designers, backend engineers, and product teams from design through production, using clear thinking, strong collaboration, and well-structured execution to deliver dependable products.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, React Hooks, Responsive Web Design, Accessibility, Tailwind CSS, Sass, Styled Components, Material UI

Interfaces and Integration: Figma-to-code, REST APIs, API integration, forms and data submission, authentication interfaces, dashboards, client portals, responsive mobile interfaces, Axios, React Query, RTK Query

State and Backend: Redux, Redux Saga, Zustand, Node.js, Express.js, Firebase, Supabase

Testing and Delivery: Jest, Testing Library, Playwright, Cypress, Vitest, edge-case testing, user acceptance testing, code review, Git, GitHub, Docker, Vercel, CI/CD, Jira, Agile, Chrome DevTools

PROFESSIONAL EXPERIENCE

Frontend Developer | VarySoft Technologies

March 2026 – Present | Remote

- I build client and internal products, including operational tools and admin dashboards, by turning business requirements into reusable component structures and clear page-level interface flows.

- I develop production React, Next.js, and TypeScript interfaces from Figma and UI/UX direction, maintaining close visual accuracy, responsive behaviour, and dependable user flows across screen sizes.
- I implement form flows, loading states, empty states, API failure handling, accessibility considerations, and mobile layouts so business tools remain usable under real operating conditions.
- I establish reusable component patterns and frontend practices that improve consistency across projects and support delivery across multiple codebases.
- I review implementation choices, document frontend decisions, and guide code quality across projects without unnecessarily rebuilding working systems.

Software Engineer | Inner Compass Well-being

October 2025 – January 2026 | Canada, Remote

- I built an inter-practice management dashboard that brought client caseloads, session workflows, and practice operations into one React, TypeScript, and Redux interface for therapists.
- I integrated REST APIs for data updates and session tracking, handling loading, error, and empty states to make the dashboard more dependable for day-to-day use.
- I worked across frontend and backend delivery to clarify requirements, align implementation, and reduce integration friction between teams.
- I maintained documentation, task tracking, and reporting systems so feature logic and delivery progress remained clear in a remote Agile environment.

Frontend Developer | NamuLabs

October 2024 – April 2025 | Remote, Korea

- I built production React and TypeScript interfaces for Web3 products, delivering responsive and accessible frontend features under tight timelines.
- I translated Figma direction and product requirements into reusable components while working directly with designers, backend engineers, and stakeholders.
- I implemented wallet connection flows with ethers.js and WalletConnect, troubleshooting onboarding and transaction states across the user journey.
- I contributed to component-system and frontend architecture decisions that supported maintainability and consistent behaviour across product sprints.

Frontend Developer | NinoHairs

March 2024 – July 2024 | Lagos, Nigeria

- I led frontend development for an eCommerce platform, building responsive product pages, authentication workflows, and an admin dashboard used to manage 200+ SKUs.
- I integrated Paystack payment systems and backend APIs to connect customer-facing checkout flows with business data and operational reporting.
- I delivered MVP features in a fast-paced startup environment while working cross-functionally with product and engineering.

Fullstack Intern (Full Time) | Tongston Entrepreneurial Group

January 2023 – July 2023 | Nigeria

- I built a consultation booking application with React, Styled Components, Material UI, and Firebase, giving clients a clearer way to schedule services and helping the company support its consultation workflow.
- I integrated the Flutterwave payment gateway to make the booking and payment journey more direct for users.
- I used GitHub for version control and team collaboration, keeping changes organised as the application evolved.

Frontend/IT Intern | Tongston Entrepreneurial Group

August 2022 – February 2023 | Nigeria

- I maintained and improved existing web application features, making everyday user flows more reliable and easier to use.
- I supported user acceptance testing by checking functionality, identifying issues, and helping confirm that releases met client needs.
- I identified recurring technical issues and implemented preventive fixes to reduce avoidable system problems.

SELECTED PROJECTS

SalesPulse | Point of Sale and Inventory Management System

[Live Demo](#)

- I built a Next.js and React business operations platform that gives managers real-time visibility into sales activity, stock, customer credit, expenses, and profit.
- I designed responsive dashboards with searchable transaction history, current stock levels, debt exposure, and recent business activity, turning operational data into faster day-to-day decisions.
- I implemented AI-assisted business analysis and automated reporting to reduce manual reporting effort and help managers query operational data more directly.
- I integrated Clerk authentication and Convex data workflows to support secure, role-relevant access to business operations.

Techcare Dashboard | Healthcare Dashboard

[Live Dashboard](#) · [GitHub](#)

- I built a responsive healthcare dashboard for medical professionals to manage patient records, diagnosis history, vital signs, and laboratory results in one interface.
- I implemented reusable React and TypeScript components, API integration workflows, and interactive data charts with React Query, Recharts, Tailwind CSS, Radix UI, and Framer Motion.
- I structured information-heavy screens around clear records and decision-relevant data, improving usability for professionals who need to review patient information quickly.

OMA Life Practice Management | Practice Management Platform

[Project Reference](#)

- I built a practice-management experience for therapists covering client notes, session notes, reports, staff management, secure messaging, and client-data migration.
- I structured the interface around clear records and repeatable daily tasks, helping practitioners manage client information and practice operations from one system.

EDUCATION

ALX Africa | Software Engineering Program

University of Benin | B.Eng, Chemical Engineering
